

Integrating DropBox with Authomize

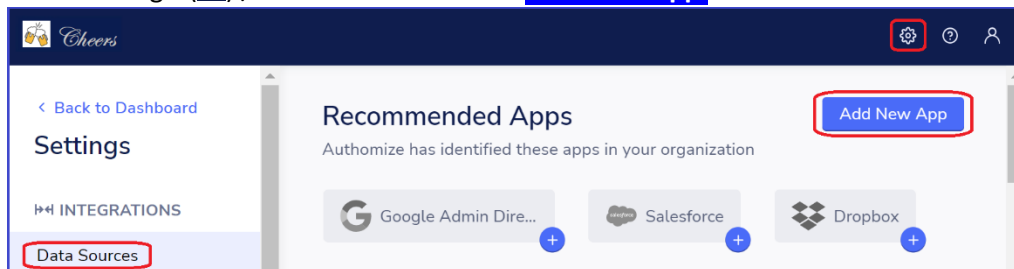

Integration with DropBox provides visibility about the identities and assets on your organization's DropBox account. After integration, Authomize provides visibility into DropBox, enabling improved identity security and automated access reviews.

DropBox integration workflow

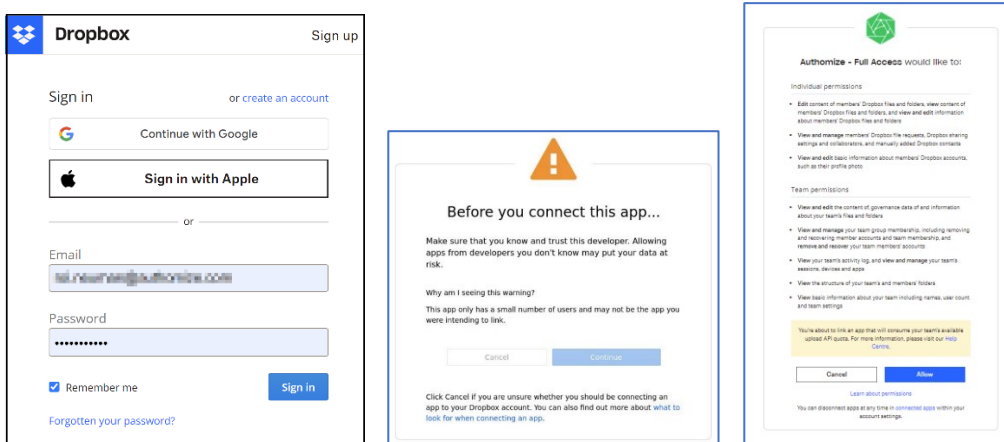

Installation

1. Log in to Authomize.
2. Go to Settings (⚙️) /Data Sources and click **Add New App**.

3. Click DropBox
4. In the Integrate DropBox dialog:

Step 1. Log into DropBox as an admin and allow Authomize to access DropBox.

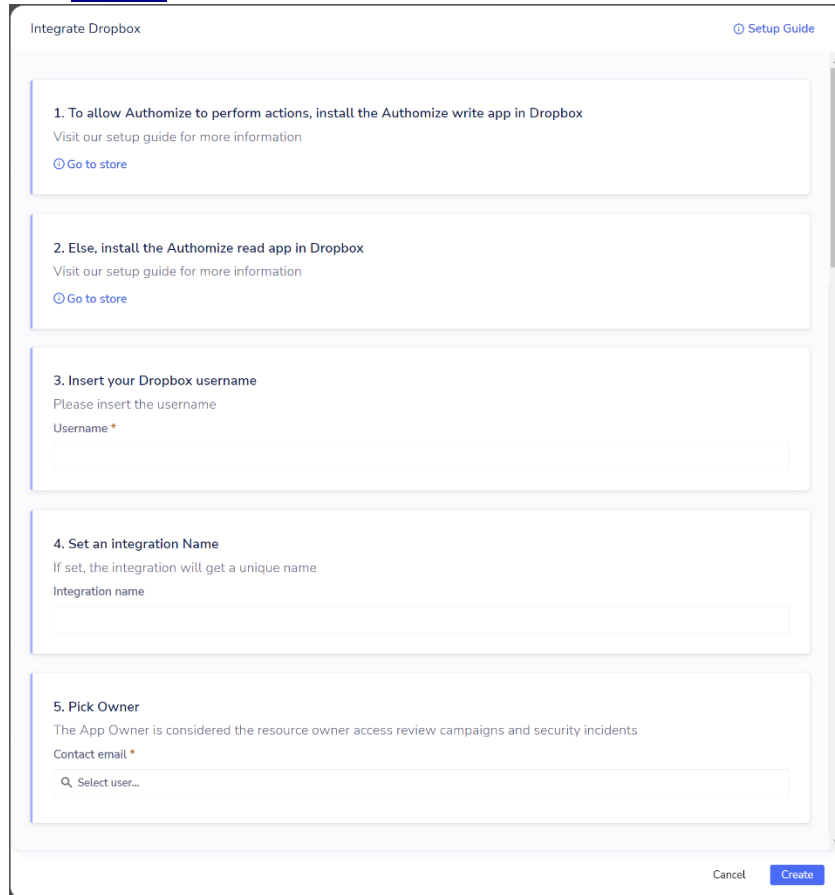

Step 2. Skip this step if you already logged in (in Step 1).

Step 3. Enter your DropBox username.

Step 4. Provide an integration name.

Step 5. Provide the email of the integration owner.

Click **Create**

The screenshot shows a web form titled "Integrate Dropbox" with a "Setup Guide" link in the top right. The form is divided into five numbered steps:

- 1. To allow Authomize to perform actions, install the Authomize write app in Dropbox**
Visit our setup guide for more information
[Go to store](#)
- 2. Else, install the Authomize read app in Dropbox**
Visit our setup guide for more information
[Go to store](#)
- 3. Insert your Dropbox username**
Please insert the username
Username *
- 4. Set an integration Name**
If set, the integration will get a unique name
Integration name
- 5. Pick Owner**
The App Owner is considered the resource owner access review campaigns and security incidents
Contact email *

At the bottom right of the form, there are "Cancel" and "Create" buttons.

You will see DropBox in your Connected Apps list when Dropbox is integrated.
